

MDMPrefill

AI POWERED PRODUCT MASTER DATA EXTRACTION

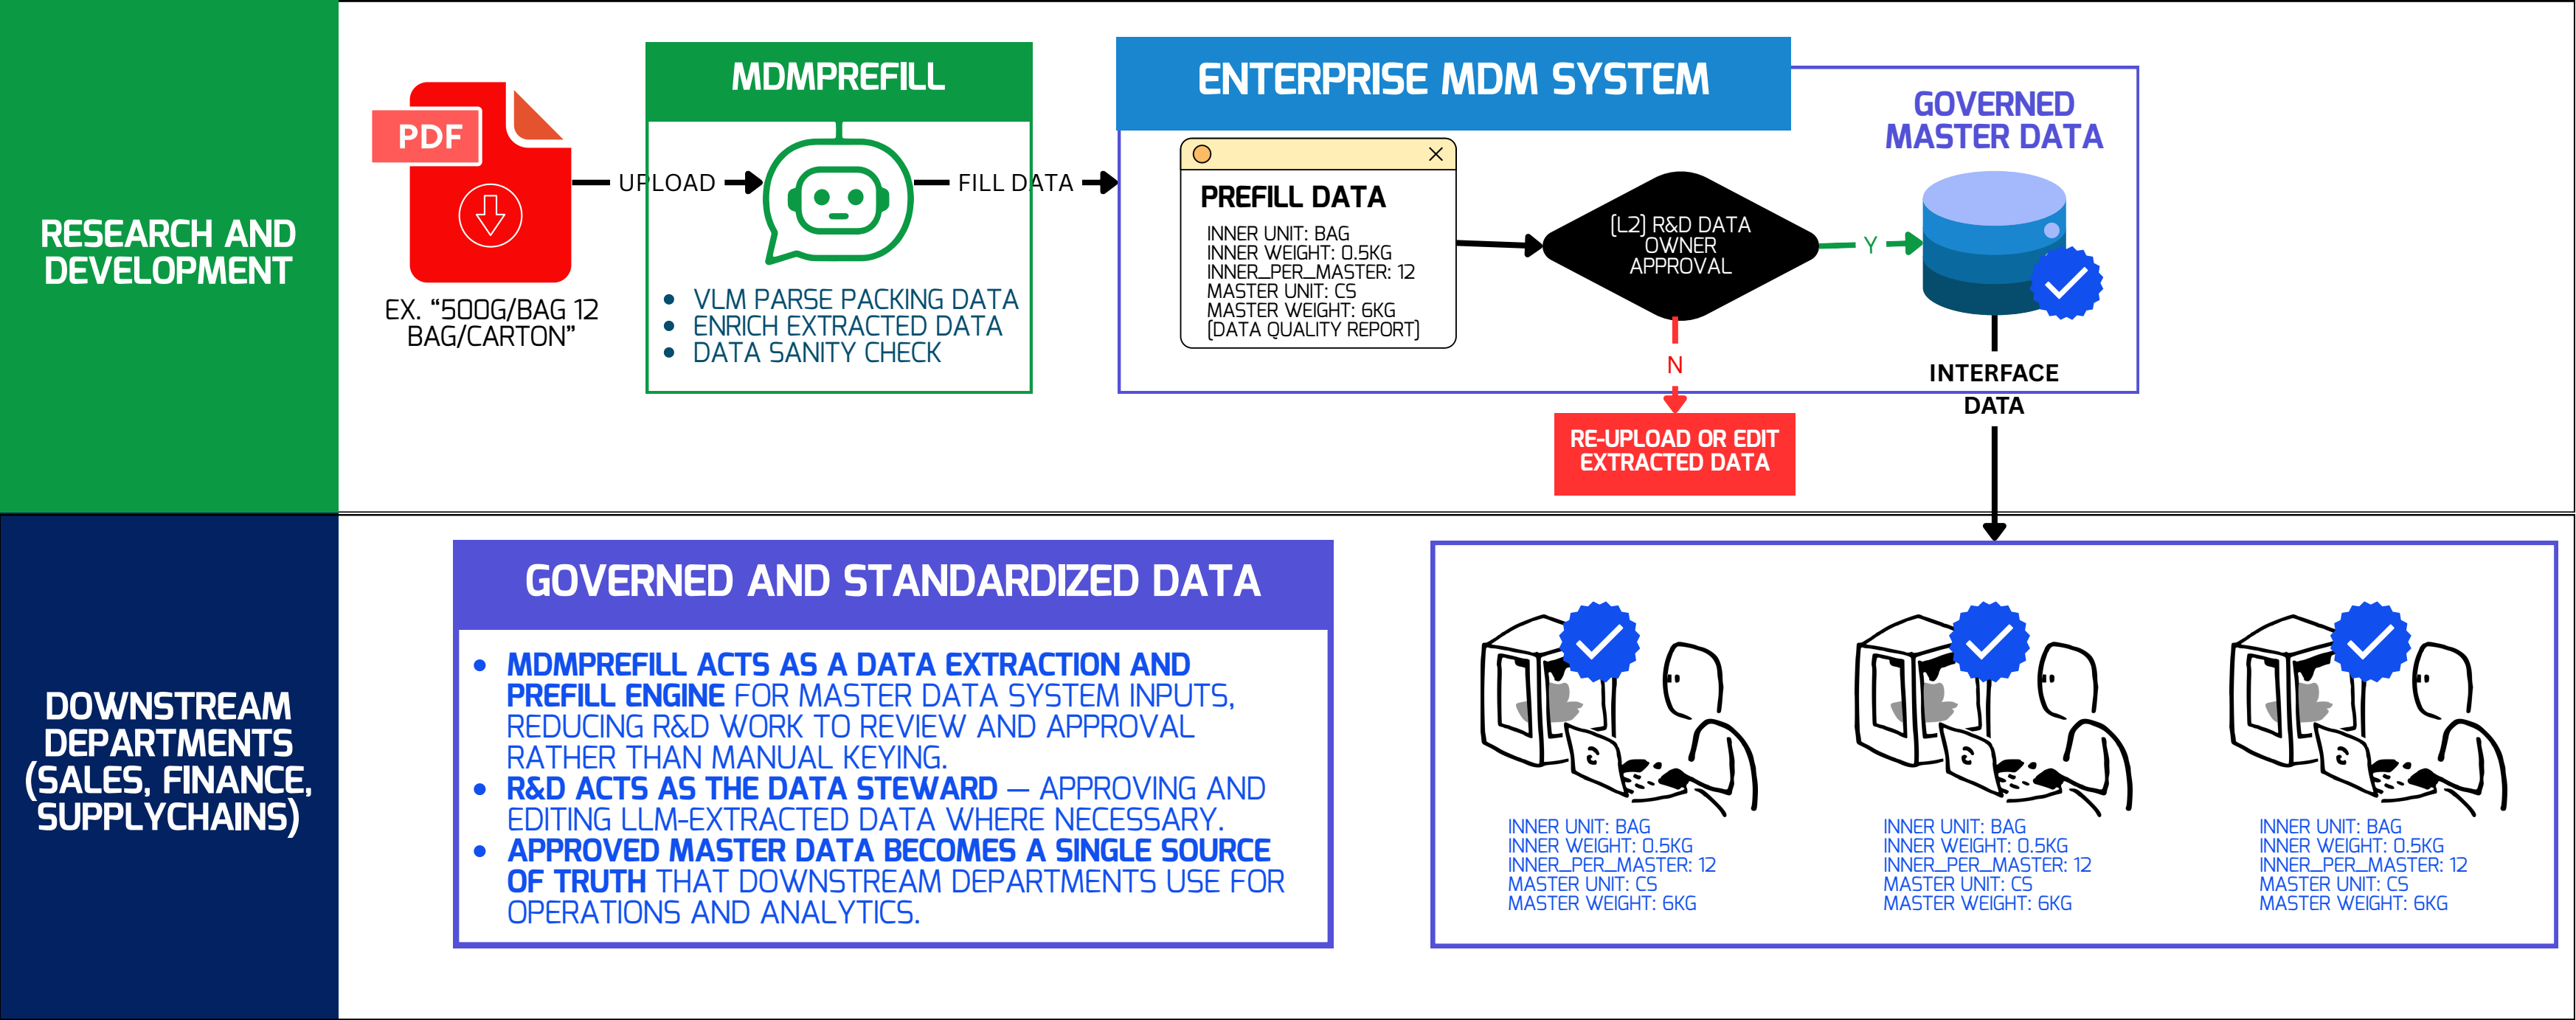

— PE6201 - PURI DECHASIRIPONG

PROBLEM & SIGNIFICANCE

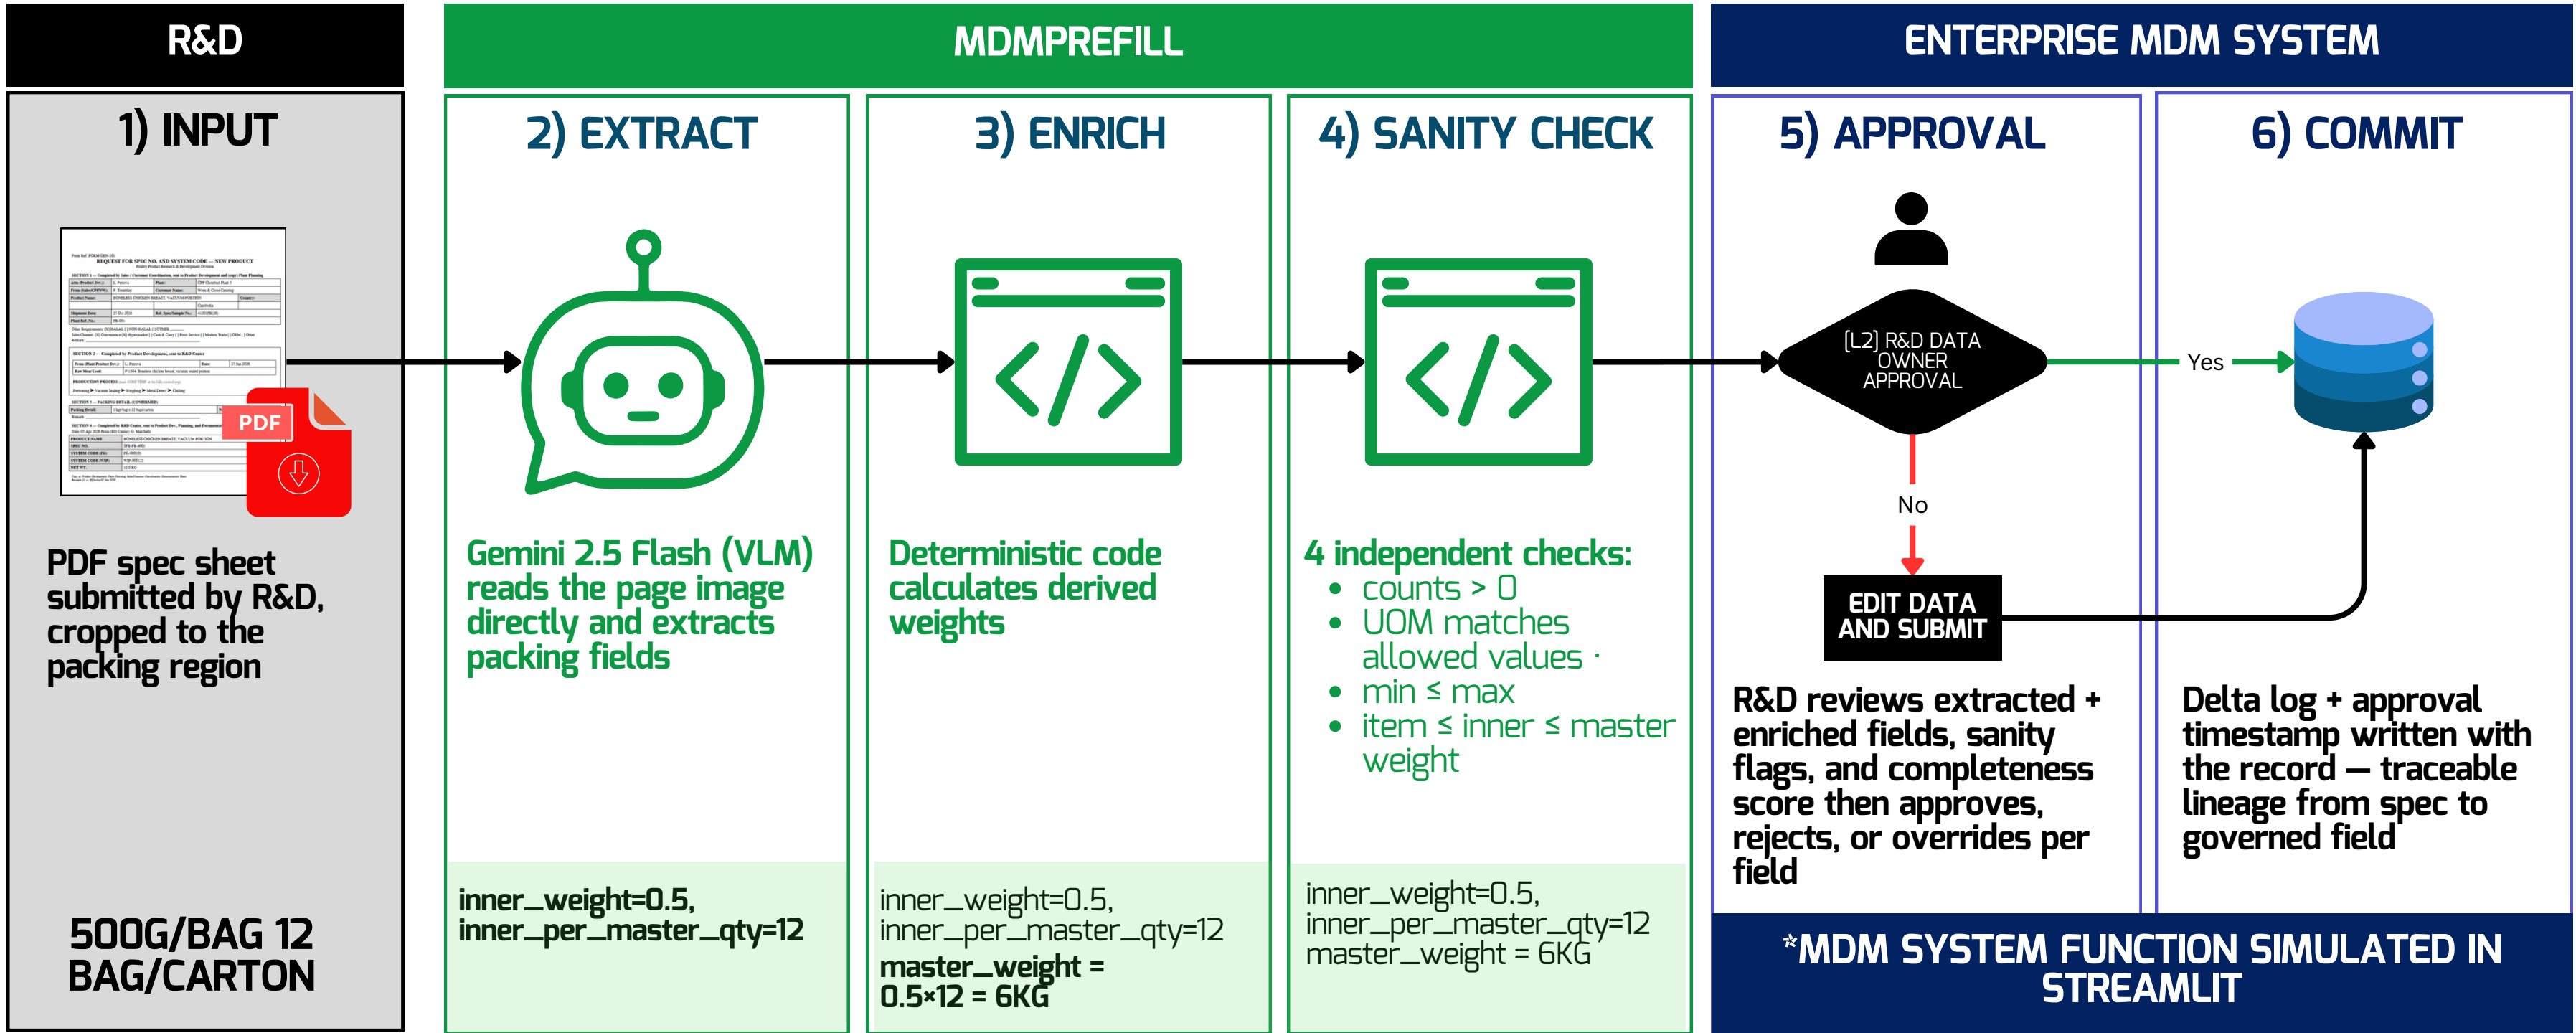

BAD UPSTREAM DATA PROPAGATES ACROSS THE ENTERPRISE AND IS ONLY DISCOVERED WHEN THE DAMAGE IS ALREADY DONE (E.G. MISMATCH BETWEEN SALES ORDER AND WAREHOUSING DATA)

SOLUTION ARCHITECTURE

THIS IS RUNG 2: AI PERFORMS THE EXTRACTION, DETERMINISTIC CODE ENRICHES THE DATA, AND A HUMAN MAKES THE FINAL DECISION BEFORE COMMITTING TO THE MDM SYSTEM.

DEMO

EVALUATION RESULT

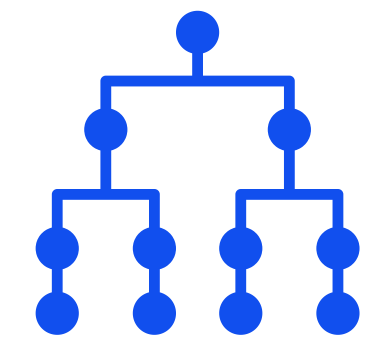

TRADE OFF AND GOVERNANCE

TRADE-OFFS

- **MANDATORY HUMAN GATE** — MDM ERRORS PROPAGATE DOWNSTREAM; ONE WRONG DECIMAL CASCADES BEFORE ANYONE NOTICES. REVIEWER COST IS MINIMAL. AUTOMATION RISK IS NOT WORTH IT.
- **NON-ATOMIC WEIGHT PATTERN** — MODEL EXTRACTS GROUP TOTAL INSTEAD OF PER-UNIT WEIGHT ON FORMATS LIKE 1.33KGX8BAGSX10UTERBAG. LEFT UNFIXED — FORMAT IS RARE IN REAL DOCS AND A FIX RISKS BREAKING THE COMMON CASE. L2 CATCHES IT.

GOVERNANCE CONTROLS

- **HARDCODED L2 GATE** — EVERY RECORD REQUIRES EXPLICIT APPROVAL. SANITY FLAGS, COMPLETENESS, AND EXTRACTION RESULTS SHOWN SEPARATELY SO REVIEWER JUDGES, NOT RUBBER-STAMPS.
- **DATA LINEAGE** — DELTA LOG CAPTURES WHAT CHANGED AT REVIEW + TIMESTAMP. SOURCE DOC + APPROVED OUTPUT = TRACEABLE LINEAGE FROM SPEC TO MDM FIELD.
- **NON-ATOMIC COMMIT** — GATE AND ERP WRITE ARE SEPARATE STEPS. VALIDATION ERRORS CAUGHT BEFORE PROPAGATION.
